

## **S1-P.62**

# **On determination of Gyrotory Characteristics of Optically Active Crystals**

I.G. Stamov, D.V. Tkachenko

*Department of Physics and Mathematics, Dniester State University, Tiraspol, Moldova*

The cause of the optical activity oscillation effects have been studied. It is shown, that the investigations of the oscillation effects in the transmission of crystals placed between two crossed polarizers, allow us to define the gyrotory characteristics of the crystals.
